MOST RECENT FIRE TESTING DATA AS PROVIDED TO

A HIGHLANDS MUTUAL WATER COMPANY SHAREHOLDER

After a shareholder requested fire hydrant testing data from Highlands Mutual Water Company a few years ago, Highlands provided them with the following spreadsheet. Highlands Water told them it was the most current information they had about testing their fire hydrants.

The same shareholder followed up in 2024 with a request for updated data, but was told there is no new information available.

The report shows the reported state of Highlands Water's fire hydrants in their service area and a cover sheet of totals is included as page one, prior to Highlands's data. From what the data indicated, there is a strong likelihood that a wildfire in Highlands's service area will cause catastrophic impacts to the entire City of Clearlake.

Highlands Water's hydrant testing data shows:

- 193 total hydrants reported within their service area
- 16 (8%) apparently do not function at all, with zero recorded for the flow.
- Close to 7 in 10 hydrants do not meet common residential standards of 1,000 gallons per minute (68% = 132 hydrants)
- 822 is the average gallons per minute of all hydrants in Highlands's area, well below typical standards for residential areas, and far below standards for commercial development.
- 1,000 gallons per minute is a common minimum residential standard for hydrant flow; much higher flow rates are required for commercial development depending on building size and construction materials.
